Business Logistics Development Association LLC

Business Logistics Development Association: Objectives and Goals

The **Business Logistics Development Association LLC ("ARBL")** was established in **2009** in order:

- to support the development of the transportation and trade logistics;
- to develop conditions for the organisation of training and qualification development for specialists in the field of the transportation and trade logistics;
- to develop proposals on the enhancement of the legislation focused on improving legal and economic conditions for the exercise of business;
- to create conditions for the development and practical application of achievements of the industrial, trade, information, transportation, warehousing, management logistics, and other forms of logistics in Uzbekistan.

Currently, **25 companies and organisations** are Associate Members of ARBL.

Ongoing Projects

- Training and qualification development of corporate specialists and teachers of education establishments of the republic in fundamentals and modern methods of logistics (Logistics Training Project) (Project partner: SEQUA).
- Capacity Building towards Advancing ISO Standards and Quality Management in the Transportation and Logistics Sector (Project partner: GIZ).
- Training and Qualification Development of the National Capacity in Fundamentals of the International Transportation Law (Project partner: OSCE).
- CAREC Corridor Efficiency Measurement and Monitoring (Project partner: ADB).
- www.logistika.uz Transportation Information and Logistics Portal

Need for Creating the Transportation Information and Logistics Portal

- The lack of a unified information database of applicable legislative acts and regulations in the field of transportation and logistics;
- The lack of a region-wide search system and information database of the existing companies and organisations that offer transportation and transportation/forwarding services with a list of services offered and basic tariff rates;
- The lack of the updatable information about the availability of vehicles;
- The lack of the information database about the availability of finished products, their type and end recipients.

Project Objective and Goals

- The Project objective is to create a single Transportation Information and Logistics Internet Portal for transportation companies (hauliers) and entrepreneurs (cargo owners).
- The goal of the project is to reduce the share of transportation and logistics costs in the cost of products imported from or exported to the principal markets by ensuring the efficient use of transport corridors and vehicles.

Information Portal

- The portal is a unified information database of transportation and forwarding companies, including the information about the cargo availability and cargo transportation opportunities.
- The portal is the rapid and efficient means of the exchange of information on the cargo transportation market among hauliers, forwarders, cargo owners and consignors.
- All catalogues and information offered at the portal are also available in English.

Do you need the permanent quantity of freight? Do you want to find the reliable transport company to realize the freight transportation? Do you want to sign a contract for insurance and forwarding of your freight transportation with qualified companies? Or are you looking for logistic warehouse terminals to storage freight? All these you can find at Transport and Logistics Information Portal www.logistika.uz.

The Portal was designed following the results of participants' needs of international freight transportation process, where companies dealing with transportation services, forwarding, storage and customs clearance, are included.

The Informational Platform was created for participant of Transport and Trade Logistics and meets the standards of "Single Window". There every user can find any specific information or service himself related to the transport and trade infrastructure.

Besides this www.logistika.uz provides national and international carriers to a new logistic service as a road map of driver which makes easier the calculation of the shortest distance between cities of Uzbekistan. This service includes constantly updated information about the objects of roadside infrastructure and services along highways in Uzbekistan, including roads of international importance.

Driver's Route Map
Calculation of the shortest path between the cities of Uzbekistan

There was designed the new Transport and Logistics Information Internet Portal www.logistika.uz, the unique in Central Asian Region. This informational resource is for entrepreneurs (freight owners) and transport companies (carriers) as well as for companies and organizations providing complex of services on forwarding, insurance and customs clearance of cargoes.

Information Resources of the Portal

Offers from Cargo Owners:

Offers of the cargo to be transported.

Offers from Hauliers:

Offers of the free or concomitant transportation opportunities (using road, air and railroad).

Information Resources of the Portal

Regulatory Framework:

This section provides texts of the applicable legislative acts and regulations of the Republic of Uzbekistan, as well as international conventions in the field of international transportation and trade.

Information Centre:

This section can be used for announcing vacant jobs or sales of vehicles, etc. The information about tenders can be provided in the Tenders section; articles and publications on transportation logistics can be found in the Articles and Publications section.

Information Resources of the Portal

Forum

The forum is a platform for the exchange of professional experience and opinions among players of the cargo transportation market. They also can find a job or personnel, and warn colleagues about *mala fide* partners.

Glossary

The glossary offers definitions of basic terms needed for foreign trade transactions and the international cargo transportation.

Road Atlas — a road map for the driver

- The Atlas has become one of the elements of the modern multi-purpose transportation and transit infrastructure of Uzbekistan with the direct impact in the form of the improved efficiency of the operation of intermodal logistic centres in Uzbekistan.
- The Uzbekistan Road Atlas contributes to the further development of the transportation and transit potential of the Republic of Uzbekistan, the attraction of new cargo streams, the increase in exports of transportation services, and the provision of extra convenience for drivers.
- The atlas enhances the transit competitiveness of the national motor roads by making them more attractive for international road hauliers.

- An important feature of the Driver's Roadmap is the indication of road infrastructure objects with detailed descriptions and location data.
- This information can be interesting not only for drivers, but also for tourists and entrepreneurs.
- The Roadmap can be used by entrepreneurs designing and building new road infrastructure and service facilities along main international roads and creating new jobs in the process.

Portal Development Plans

1. **Stage 1** - creating a pilot portal for testing and studying the needs of users (www.logistika.uz)
Stage 2 - creating a full-fledged platform for members of the CAREC Federation of Carrier and Forwarder Associations (FAPE) of CAREC countries.
2. Developing the portal's functionality:
 - Vacancies
 - Training and Qualification Development
 - Seminars and Conferences
3. Co-operation within the CAREC Federation of Carrier and Forwarder Associations, TRASECA and other regional organisations.

Co-operation with TRASECA

1. The portal can become a platform for the co-operation between CAREC and TRASECA programs by providing entrepreneurs with the single point-of-contact access to integrated information databases of:
 - hauliers, forwarders and cargo owners;
 - laws and regulations;
 - trade and transit development projects and initiatives.
2. The development of Interactive Roadmaps for drivers from CAREC and TRASECA countries with the indication of road infrastructure facilities along East-West and North-South transportation corridors.
